### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The prior art taken alone or in combination fails to teach or suggest the limitations of at least independent claims 1, 2 and 35 or **a method and/or system for setting a filter to control advertisements directed at a user, wherein the filter includes user-established settings for a reward threshold, generating an estimate of a number of advertisements that are expected to be received by the user, the estimate is based in part on the reward threshold, sending advertisements to the user, based on the user-established settings for the reward threshold, wherein the reward threshold comprises a minimum level of reward such that only advertisements with a reward above the minimum level of reward are provided.** Thus, claims 1-12, 15-29, 31-38 and 40-43 are said to be patentable over the prior art.

For example,

**US 2009/0125395 to Coleman discloses** a method for delivery of targeted commercial messages. The method comprises assembling a plurality of potential purchaser profiles in an electronic file for presentation to at least one potential advertiser of goods or services applicable to a substantial portion of the plurality of potential purchasers, developing commercial message selection criteria for selecting from the potential purchasers those suited to receive a specified commercial message contained in a set of commercial messages, applying the commercial message selection criteria to the purchaser profiles to identify the potential purchasers suited to receive specified commercial messages, and presenting over a data network to a potential purchaser identified as suited, the specified commercial messages (See abstract).

**US20080052171 to Eldering discloses** an advertisement selection system in which vectors describing an actual or hypothetical market for a product or desired viewing audience can be determined. An ad characterization vector is transmitted along with a consumer ID. The consumer ID is used to retrieve a consumer characterization vector which is correlated with the ad characterization vector to determine the suitability of the advertisement to the consumer. The consumer characterization vector describes statistical information regarding the demographics and product purchase preferences of a consumer, and is developed from previous purchases or viewing habits. A price for displaying the advertisement can be determined based on the results of the correlation of the ad characterization vector with the consumer characterization vector (see abstract). The price to present an advertisement can increase with correlation, as may be typical when the content/opportunity provider is also the profiling entity. **The price can decrease with correlation when the consumer is the profiler, and is interested in, and willing to charge less for seeing advertisements which are highly correlated with their demographics, lifestyle, and product preferences** [0015].

**USP 6,519,571 to Guheen** discloses a system for utilizing various types of user indicia such as search requests, products purchased, products looked at but not purchased, products purchased and returned, reasons for returning products, customers stated profile including income level, education level, stated profession, etc. for the purpose of customizing a user interface (See abstract).
